

HASMAT[®]

*Advanced Software for
Dangerous Goods Transport™*

Compliance **Doesn't** Have to be Confusing

Hazmat, by the Bureau of Dangerous Goods, Ltd., is an inspection and verification software product designed exclusively for dangerous goods consignments being transported by air. Hazmat is an "Expert System" that helps carriers to identify areas of compliance/non-compliance according to IATA/ICAO regulations, reducing clerical time and helping you eliminate costly shipping errors. This innovative software program is more than a mere reproduction of government shipping regulations; Hazmat employs regulatory intelligence, eliminating individual interpretation, confusion and headaches regarding proper documentation, packaging, marking and labeling.

Hazmat Key Benefits:

- Processes non-radioactive/radioactive materials
- Completes a single, preformatted input screen from Shipper's Declaration form.
- Three-dimensional packaging requirements diagram
- Lists allowable packaging variations
- Automatic Q-Value calculation, validation & package quantity restrictions
- Bar code scan

- Produces automated compliance check-list for company retention files
- Automated NOTOC printout with emergency response information
- Current with IATA, ICAO & CFR 49 171.22 & 175 regulations
- Operator & State variation listing for reference
- Assigns potential state & operator variations

NOTOC NAVIGATOR

Ship with Ease and Security

NOTOC Navigator works hand-in-hand with Hazmat. The program allows airline users to assign multiple shipments from the Hazmat program to single or multiple flights, quickly and easily. With multiple-ULD and "flight-manifest"-style NOTOC printout capabilities, preparing dangerous goods air shipments has never been easier.

The Bureau of Dangerous Goods offers products, services and training to make the shipping and handling of dangerous goods easier and safer for us all.
